STATEMENT

INFRASTRUCTURE · CONSTRUCTION · DELIVERY

Design & construct infrastructure that moves cities.

Complex civil and structural delivery across Australia —
from early contractor involvement through to commissioning
and handover.

One team, end to end.

Metro Project Services is an Australian design and construct contractor delivering complex civil and structural infrastructure. We take projects from early contractor involvement through design management, construction, commissioning and handover — accountable for the outcome at every stage.

Founded and built on more than forty years of combined construction experience, our teams have delivered over two billion dollars worth of projects Australia-wide. We self-perform the work that matters — earthworks, excavation, shoring and structures — so programme, quality and safety stay in our hands. Our approach is direct: collaborate early, engineer for buildability, and deliver on programme without compromise to safety. Delivery you can stand on.

CONSTRUCTION EXPERIENCE

D&C

DESIGN & CONSTRUCT
DELIVERY, END TO END

An impeccable safety record across every project. Safety is not a programme item — it is how we work, every shift, on every site.

What we deliver.

A single accountable team across the full project lifecycle. We self-perform the core civil scope and manage design, programme and trades to a controlled, buildable outcome.

Design & Construct (D&C)

Single point of responsibility from concept design through to construction and handover.

Early Contractor Involvement

Engaged early to de-risk design, programme and cost before a shovel hits the ground.

Civil & Earthworks

Bulk and detailed earthworks, site preparation, subgrade and pavement works.

Excavation & Shoring

Deep excavation, shaft construction, shoring, propping and dewatering.

Bridges & Structures

Reinforced concrete structures, bridge works, beam installation and precast.

Drainage & Utilities

Stormwater, drainage, sewer and wet/dry utility relocation and installation.

Roads & Pavement

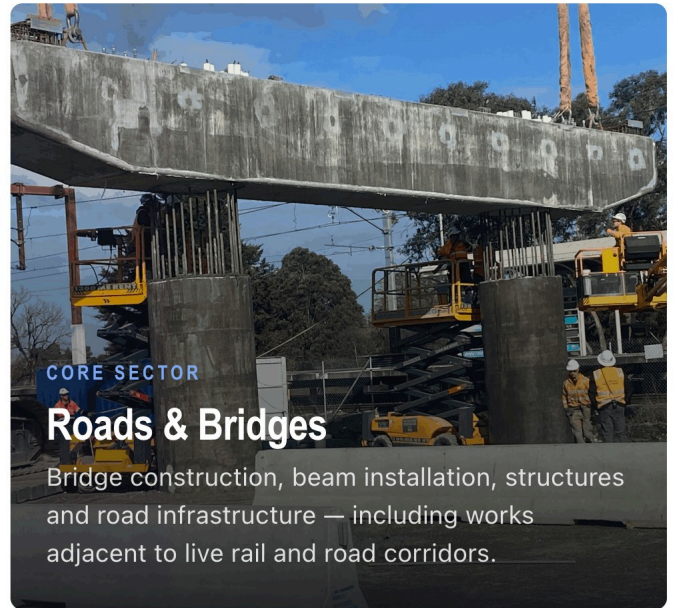

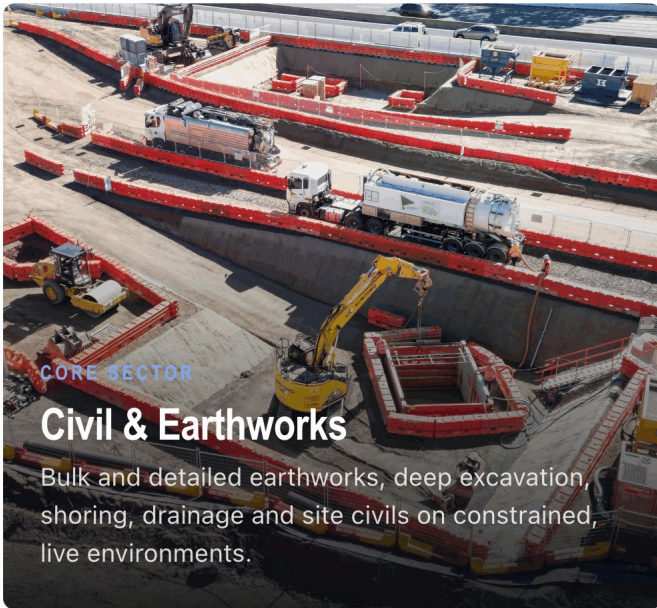

Road formation, kerbing, pavements and associated civil infrastructure.

Project & Construction Management

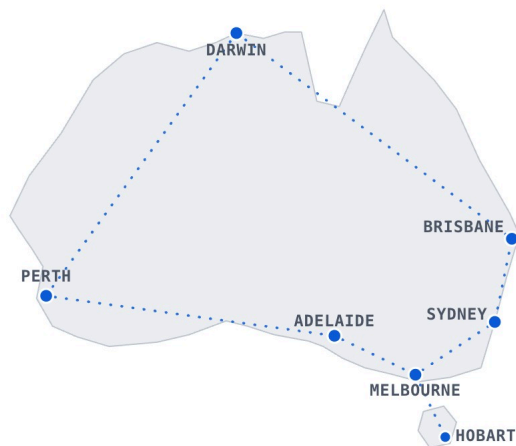

Programme, quality, commercial and stakeholder management end to end.

Where we work.

NATIONAL REACH

Delivering across Australia

Drainage & Stormwater

Pits, pipes, culverts and stormwater networks.

Utilities & Services

Sewer, water and dry utility relocation.

Rail-adjacent Works

Civil and structural works within rail corridors.

From early involvement to handover.

We use Early Contractor Involvement and the Design & Construct model to bring construction knowledge into the design — reducing risk, improving buildability and protecting programme and budget from day one.

01	Early Contractor Involvement	We join early to test buildability, sequence the works and de-risk cost and programme before design is locked.
02	Design management	We manage design to a buildable, value-engineered outcome — coordinating consultants, authorities and constraints.
03	Construct	We self-perform the core civil scope — earthworks, excavation, shoring and structures — controlling quality and programme directly.
04	Commission	Testing, verification and compliance — proving the asset performs to specification before it is handed over.
05	Handover	Complete documentation, resolved defects and a clean handover the client can rely on.

ROADS & BRIDGES

Nirimba Bridge

Construction of a new bridge structure including substructure works, beam installation and deck construction. Delivered in a constrained corridor adjacent to live infrastructure, with crane lifts and works sequenced around operational and access constraints to maintain safety and programme.

SECTOR	DELIVERY	SCOPE	STATUS
Roads & Bridges	Design & Construct	Structure & beams	Delivered

- ✓ Substructure, abutments and pier works
- ✓ Works adjacent to live corridor

- ✓ Crane-lifted beam installation
- ✓ Deck construction and finishing

CASE STUDY

CIVIL & EARTHWORKS

Sewer Shafts

Construction of deep shafts including bulk and detailed excavation, shoring and propping, dewatering and confined-space works. Delivered within a tightly constrained, fenced exclusion zone with rigorous control of ground conditions, access and live site interfaces.

SECTOR	DELIVERY	SCOPE	STATUS
Civil & Earthworks	Design & Construct	Shafts & shoring	Delivered

- ✓ Deep shaft excavation
- ✓ Dewatering and confined-space works
- ✓ Shoring, propping and ground support
- ✓ Controlled exclusion-zone delivery

Safety is how we build.

An impeccable safety record, project after project. We run a proactive, systems-led approach to WHS, environment and quality — embedded in planning, supervised on site and verified through to handover.

Work health & safety

SWMS, JSEAs, daily pre-starts and active supervision on every site, every shift.

Environment

Erosion, sediment and dust controls, spill management and responsible site practice.

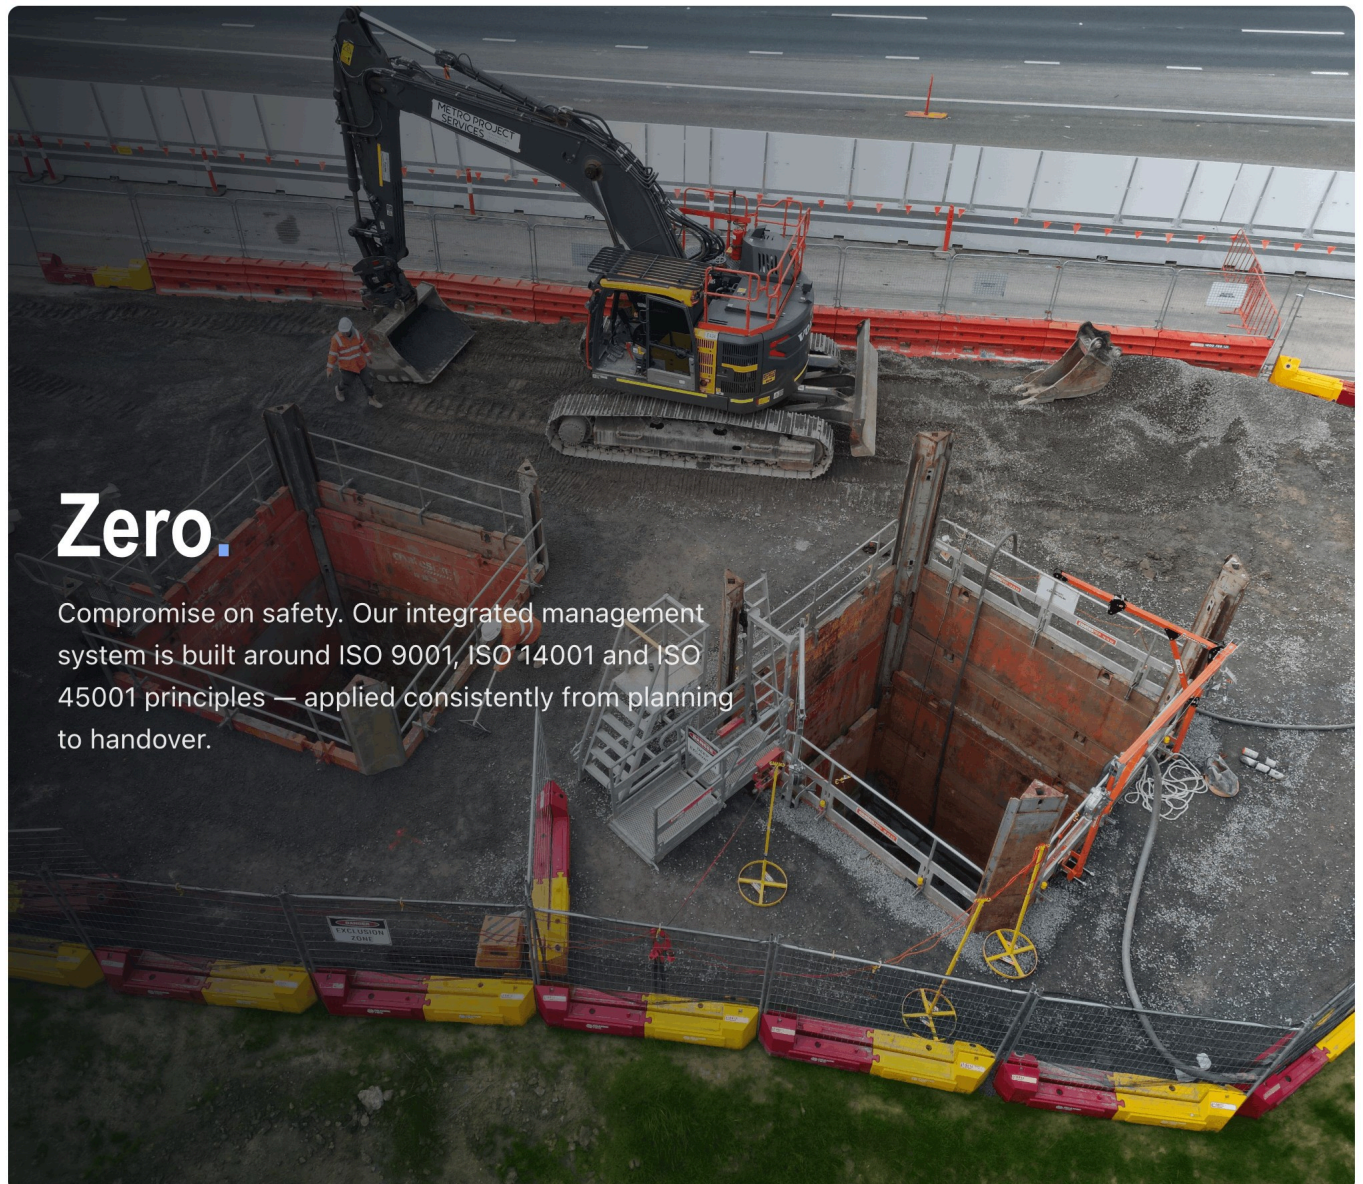

Quality

ITPs, hold points, inspection and test records — verified and documented to handover.

Zero.

Compromise on safety. Our integrated management system is built around ISO 9001, ISO 14001 and ISO 45001 principles — applied consistently from planning to handover.

Prequalified and accountable.

We hold and maintain the management systems and prequalifications expected of a delivery partner on government and Tier 1 infrastructure programs. Current certificates are available on request.
